AutoCAD Crack + (April-2022)

AutoCAD has been under continuous development for over 30 years and has received numerous awards, including being the first computer-aided design program to win the National Medal of Technology. Aerodynamics Simplified diagram of AutoCAD features that are most relevant to aerodynamics. Extensibility The growth of AutoCAD into an open-source product that can be readily customized has allowed a large number of third parties to develop their own add-ons or features, including several that add important features. Add-ons Add-ons, or customizations, are programs that can extend or add functionality to AutoCAD. These programs, usually written in AutoLISP or Visual Basic, must be installed on a user's computer to work. Installation is usually done through a download. With a large number of customizations available, many CAD users consider the add-on approach a great way to customize their software. AutoCAD is compatible with a wide variety of add-ons, which are available from a number of websites. The number of add-ons available is increasing rapidly, and it can be hard to decide which add-ons are right for you. This Guide attempts to be a good starting point for beginners, and will continue to be updated as new add-ons are released. AutoCAD Feature Index The AutoCAD Feature Index is a list of all the add-ons, features, and other items available for AutoCAD. The index is organized by add-on type: Add-ons for customization, custom commands, color management, mathematics, and other categories. The index includes links to each add-on's features and major tasks. This section also includes a list of some of the most useful add-ons. All the add-ons mentioned here are included with the software. A number of additional add-ons have been written that require a license, and are available at a number of sites. The Index is updated regularly to keep up with new releases, so you may find a particular add-on that you want available has been added or removed. Tip AutoCAD uses a naming convention for its add-ons. The files ending in.add are add-ons, while files ending in.plugin are for add-ons written by third parties. The majority of add-ons are written by AutoLISP or Visual Basic developers, but with a growing number of Python and
