Video introduction: How To Activate. Microsoft Office 2010 Mini K Activator v1.053 crack key serial [Activation Key Download] Click Activation Button after complete the order, The software key that you have just downloaded will be activated in seconds. VBA Matching Rows to Column of Data and Writing the Result into a Column I have a main sheet with various data, and I need to find the matching data to another sheet with a column. I have tried to search through the internet, but I seem to be having troubles with basic syntax and have not been able to find a solution. Currently my code looks like this: Sub Tester() Dim LastRow As Long Dim LastColumn As Long Application.ScreenUpdating = False With ThisWorkbook.Sheets("Data") LastRow = .Cells(Rows.Count, "G").End(xlUp).Row LastColumn = .Cells(1, Columns.Count).End(xlToLeft).Column 'code here End With With ThisWorkbook.Sheets("Data_to_Be_Edited") LastRow = .Cells(Rows.Count, "G").End(xlUp).Row LastColumn = .Cells(1, Columns.Count).End(xlToLeft).Column 'code here End With Application.ScreenUpdating = True End Sub What I am trying to do in the code is to start with my sheet Data where I have some information in Column G, and match the column G of Data to Data_to_be_edited where I also have the same information in column G. After all that, what I want to do is to set the formula of column H in Data_to_be_edited equal to the result of the matching data. For example: If I have the information 0.03 0.03 0.03 in my Data sheet and the information 0.01 0.03 0.03 in my Data_to_Be_Editing, I want to match
