FTP Script! is a straightforward application that allows users to create custom file transfer jobs in JavaScript, C++, Pascal, and Basic. This means that developers can quickly script customized modules for transferring documents across the Internet. Language: JavaScript Testing Methodology: Manual Testing Distributor/Developer: Appnetics FTP Script! 17.0.0.28 FTP Script! is a straightforward application that allows users to create custom file transfer jobs in JavaScript, C++, Pascal, and Basic. This means that developers can quickly script customized modules for transferring documents across the Internet. FTP Script! Features: Create detailed and customized JavaScript file transfer jobs The application is streamlined for increased productivity, as it features syntax highlighting and can even be configured to auto-complete code functions. Supported languages are JavaScript, C++, Pascal, and Basic; perhaps future versions will improve on these options, by adding more popular and modern scripting languages. At any rate, for the intended purpose, these do justice, as one can easily create file transfer jobs in JavaScript, for example. It should be noted that the program does not replace a standard GUI FTP client, as one must possess scripting knowledge to effectively transfer any data. Build and run scripts Several templates for each language are available, and one can even import external scripts. Whether opting for an external document or the built-in templates, one can accurately assess the items via the informative preview frames. At any rate, the application opens each new project in a different tab, effectively allowing multitasking processes. Once satisfied with their modules, users can build and run their scripts and an execution environment window displays detailed information on any errors found. If the script is viable, transfer speed metrics are displayed, as well as the overall progress made. A practical tool for creating customized document transfer tasks in several scripting languages As the number of people using electric vehicles continues to grow, electricity from clean sources such as solar and wind continue to grow. Together, these two new clean energy sources are expected to displace nearly 30 percent of the nation's electricity generation by 2040. That's why the National Renewable Energy Laboratory (NREL) and the Department of Energy's National Laboratories will continue to play a critical role in the nation's transition to a clean energy future with the launch of a newly designed battery module at the

Society for the Promotion of Native Manufactures The Society for the Promotion of Native Manufactures (abbreviated SPNM) was formed in 1829 to promote the manufacturing sector in the United States. History The Society, originally called the Society of Steam Engine Builders, was founded on September 27, 1829 at the Cooper Institute, New York. Its first president was John R. Fellows, president of the United States Steam Engine Builders Association. On December 20, 1829, the society changed its name to the present name. By 1840, the Society had approximately 150 members. Aims According to its founding manifesto, the SPNM: ... possesses information to demonstrate, that the present and future prosperity of the United States depends upon the establishment of manufactories located within her territory, and not in foreign countries. It possesses, also, the means and the ability, to disseminate this information to all classes of citizens. In addition to sending agents to various states, including New York, Pennsylvania, Indiana and Ohio,
