Update the DB

What's New in the AutoCAD?

When you create a drawing with the Markup command, you can add notes directly to the drawing or import notes from a file on your computer. These notes can be included with the drawing when you save or export the drawing. The Markup Draw command can import a digital image, with any changes included.

These images can be imported from files saved on your computer, or from saved JPEG or PDF images. (video: 1:13 min.) Now you can import feedback from a digital camera or other digital image device. In the last update, we introduced image file formats that are available when you import a file. Now you can import these files directly into your drawings, with any changes included. Also in the last update, you can import comments and commands

from an external text file. Now you can import comments and commands directly from files saved in.txt format. In this update, we have expanded this feature to support import files saved in other formats, including all.txt file types. All file types can be imported with any changes included, or the changes to these files can be updated in real time with the drawing changes. When the drawing is saved and opened, you can select to keep the same drawing or

import the changes. With the markups in the drawings, you can receive updates and edits to your drawings in real time. In AutoCAD® 2019, you can create a drawing with a specified set of dimensions and scale. This can save time when you have a fixed overall scale for your drawing. This can be useful when you need to maintain a fixed scale for all axis lengths. With the markups feature, you can create a drawing with a specified set of dimensions,

scales, and precision, and you can share these drawings. (video: 1:28 min.) You can scale your drawing within the drawing or on a separate page. You can scale the drawing to a specific coordinate point and view. For example, you can scale a line to a specified length, or a surface to a specified area, and view the drawing from that perspective. You can now select the preferred page layout. You can use the AutoCAD Printing toolbar to

send your drawings directly to a printer. This toolbar is available from the Windows task bar. (video: 1:40 min.) You can now receive and import feedback from the AutoCAD Printing toolbar.
