Serial number on back of Kenwood TM-V71A: KPG-224-KR-1/.Q: Is this definition of a set wrong? I have read that in measure theory, the measure of an infinite set is defined to be  $0$ . In my textbook, it says that an infinite set is a set which has positive length. I don't quite understand how, since I think the definition of an infinite set is "A set which has no end". What I mean is that by "no end", I mean not having an element which is bigger than all elements of that set. If we assume we have an infinite set  $A$ , then it does not make sense to say that  $\forall a \in A: A \setminus a = \emptyset$ . Is that definition wrong? Or are my textbook and my textbook wrong in giving two different definitions for the same thing? A: The definition of an infinite set is that it has no end. Not that it has positive length. If we want to talk about measure, the only sensible way to do so is to use the cardinal number that we assign to that set. Given any infinite set, it is possible to assign it a cardinal number (obviously, you have to have a notion of a cardinal number before you

can assign a cardinal number to a set, but it is possible to do so). It is natural to have the measure of the set be equal to this cardinal number (the cardinal being the same as the positive length). As already pointed out in
