Users can download all users presets and all users as subscriptions. Players can select a user presets preset by author, game title, code name, graphics, or up to 6 genres. Set up a local mirror to reduce network transmission and save cost of using the Internet. A local mirror is an exact copy of the World Wide Web site, so the user downloads the files directly from the mirror rather than directly from the source. When downloading the game from the iTunes store, right-click on the game you wish to download and select show in Finder to open up the list of all the available files for the game. Choose the file type you need. If you need the game on your iPhone, you must buy it from the App Store. The full version of the game is only $10.99. A free trial version is available in the App Store. However, it does not allow the user to save his game progress. The free trial may be helpful for learning about the game or for testing the game before buying it. This license type allows users to download the game, but other restrictions are put on the player. For example, some games will display ads that need to be paid for or subscriptions that the user must purchase. OpenXcom is a free, open-source modification of the original game. A community-driven project, OpenXcom is intended to offer simple, open gameplay, while maintaining the look and feel of the original game. The base game has been enhanced with original and fan-made campaigns, as well as creature customization, computer-assisted character development, and a role-playing-like interaction with your fellow player. Players are able to remain anonymous, and their characters' biographies are only visible to other players.
