Sonic TextBox ActiveX Control PC/Windows

Sonic TextBox is a high performance, highly configurable TextBox control, with a responsive interface and custom rendering engine. With no explicit dependencies on any particular version of .Net, Sonic TextBox can be used to replace all versions of the TextBox control in any Winforms applications. The new Sonic TextBox includes many advanced features including HTML formatting, Unicode support,

multiline text, Read-Only text, scrolling, and support for touch, pen, and keyboard input. Sonic TextBox is fully configurable in Visual Studio 2008/2010. The designers of Sonic TextBox have included a sophisticated theme editor which makes it easy for you to apply any of the 25 themes available. Themes are used to change the look and feel of the TextBox control, and all 25 themes are fully configurable in Visual Studio 2008/2010. Theme editing is performed within the designer of the form. Other features include multiple text colors, easily replaceable backgrounds, transparency, native mouse-over effects and tooltips, and background image support. The control can be easily styled to match the overall style of the form. In addition to being a Visual Studio theme designer, Sonic TextBox provides a Theme Designer. This is the GUI application that allows you to design the interface for the Sonic TextBox theme. Sonic TextBox Theme Designer is a visual UI designer that allows the user to create HTML themes for Sonic TextBox. This tool comes with 25 themes, and by clicking on the themes in the GUI, you can create and apply themes to the control. This makes it very easy to create a theme for your application. When you make changes to the code of your application, the theme designer will be notified and reloads automatically. The designer does not require you to restart the application to apply a new theme. Sonic TextBox is also available as a fully self-contained, stand-alone EXE application. The theme designer can be obtained at the following location: Note that Sonic TextBox provides functionality similar to HTML Tabs. However, it does not actually provide tabs for you, it simply uses a new kind of multi-line TextBox. This can be used to create tabs or "pane" layouts, which can be configured on a per-window basis. The tabs are configured within Visual Studio when using the new control. Features: Web Site Sonic TextBox is 2edc1e01e8

Sonic TextBox ActiveX Control Activation

Use the Sonic TextBox Control in your apps to add a sleek and professional look to your forms and webpages. Create professional looking, text-based form controls with ease. Add multiple colors, borders, shadows and gradient backgrounds to the rich edit control. No matter how sophisticated the look you're going for, Sonic TextBox can be customized to meet your needs. The drop down list control also includes functionality such as reading text, hyperlinking and the ability to save selected text. Features: 1. Integrated Theme Support. 2. Standard Check Boxes, Radio Buttons, Combo Boxes and Text Boxes. 3. Themes can be applied to the entire form, to each individual control or to the individual form elements such as drop down lists and combo boxes. 4. All of the advanced formatting options of the rich edit control are also supported. 5. Easy drag and drop of components onto the form. 6. Support for all Windows platform versions. This component can be used both in Silverlight and JavaScript applications. Sonic TextBox ActiveX Control Licensing: Single developer - \$399. Multi-developer - \$149. Need more Info? Check out the Demo (or read the Online Help which can be found at 9/16/2009 Create beautiful forms with the new Sonic Forms Designer! Have you been looking for a new forms designer that gives you more control and flexibility? Do you want to be able to focus on the business logic of your forms while leaving the beauty up to Sonic Forms Designer? This article will guide you through the process of installing and using the Sonic Forms Designer. Sonic Forms Designer Installation: First you need to download the latest version of the Sonic Forms Designer. The latest version at this time is Sonic Forms Designer 7.2.1. You can download the Sonic Forms Designer from the Sonic Forms website at for Windows XP, Vista and Windows 7. Simply select the version you are using from the drop down list and download. Once you have downloaded the software you need to unzip the file. This should create a folder called "Sonic Forms Designer". You can now install the software by double clicking the Sonic Forms Designer 7.2.1.exe file. Sonic

What's New in the Sonic TextBox ActiveX Control?

Sonic TextBox is a multi-platform, multi-language, rich text editor component. It can be used to provide a rich, high-quality editing experience. The component is provided as a COM DLL and has been tested on Microsoft Windows 2000, Windows XP, Windows Vista, Windows 7, Windows 8, and Windows 10. The current release is designed to work on Windows 7 and Windows 8. However, there is limited support for other Windows operating systems (for example, Windows 2000 is not supported). The COM DLL is written in C++ and is available for both 32-bit and 64-bit operating systems. A sample application is included with the component that demonstrates its usage. This control includes an editor in the form of a dropdown with 25 themes that provide a wide variety of user interface (UI) settings. **Figure 3-1:** The Sonic TextBox ActiveX Control provides a rich and pleasant user experience. Get the Look: Adding Text Boxes with Theme Support The Sonic TextBox Control is very flexible, but at times it can get a little overzealous. For example, when it comes to text color, the Color property is either too restrictive or too permissive. (And you can't access the Color property when using the Tab stop system; we discuss that in Chapter 2.) To solve these problems, you can create your own themes to customize the control's behavior. You can modify its appearance or behavior by using the built-in themes or you can create your own. Figure 3-2 shows the default control with three themes included. **Figure 3-2:** Sonic TextBox supports themes and their visual modifications. Creating your own custom themes Creating your own custom themes for Sonic TextBox control is very easy. In Figure 3-3, you can see a theme in action. This sample theme takes a basic theme (Light) and changes it to a dark theme (Dark). To change a theme to a dark theme, you simply set the Theme property to `Dark`. The Dark Theme appears in the Sample Application's dropdown list (refer to Figure 3-2). **Figure 3-3:** Create your own custom theme to customize the appearance of the control. Note that the appearance of the control in a theme is not limited to the control's theme. For example, when you apply a Dark theme to a Light Control, you should see a Light Control with some dark elements added. If the Control uses a Light theme, some elements are dark and some are light. Provide your end users with more control over the appearance of your application by providing themes, including their own. If you add your own custom themes, make sure they follow some guidelines: Keep the number of themes small (less than 10 is usually a good starting point). Keep the themes short (no more than 10 lines).

System Requirements For Sonic TextBox ActiveX Control:

Compatible with Windows XP/Vista/7/8/8.1/10 (64-bit) Minimum RAM: 1 GB
Minimum System RAM: 1GB Minimum Free HDD Space: 2 GB We recommend having at least 2 GB free hard drive space. Minimum System Requirements:
Minimum Free HDD Space: 2 GB
